

FERNANDO OROPEZA HERNÁNDEZ

Data | Process Automation | Solution Development | Cloud

Mexico City | foropeza0526@gmail.com | +52 55 7696 6691 | LinkedIn: [Fernando Oropeza](#) | Portfolio: [Fernando.com](#)

PROFESSIONAL SUMMARY

Systems Engineer with experience in data analysis, process automation, and solution development for business, operational, and quality processes. Experience in financial services, the pharmaceutical industry, and mobility projects, integrating data, applying business rules, and developing tools with Python, SQL, BigQuery, Excel, and Power BI. Combines operational knowledge, data control, and the ability to turn business needs into functional and traceable solutions.

PROFESSIONAL EXPERIENCE

AMERICAN EXPRESS MEXICO | Contracted via Stratis **SQL Administrator | Data, Automation, and Process Improvement** **October 2024 – Present**

Designed, developed, and implemented solutions to modernize Sales Support information processes, transforming scattered data and activities into tools that centralize information, automate key tasks, and strengthen sales operations monitoring, support for sales executives, and decision-making within the department.

- Design and maintain BigQuery solutions to integrate, standardize, and transform information related to merchant accounts, sales executives, campaigns, industries, visits, coverage, and billing.
- Develop data processes that support Performance tracking, incorporating calculations, validations, and business criteria to consolidate information on sales operations and results.
- Develop and continuously improve Power BI dashboards to analyze sales indicators, monitor results, and present information clearly to operational users and business stakeholders.
- Developed and currently maintain Coverage GAP Form, a Python desktop application used by sales executives to record sales and merchant information, including validations, autofill features, business rules, and import and export functions.
- Automate the NAF process by integrating operational and billing information to classify merchants and determine promotions, payments, and exclusions according to business criteria.
- Implement data quality controls to identify duplicates, cancellations, incomplete records, and differences between sources, while maintaining the traceability of adjustments and the integrity of the original information.
- Automate data processing and standardization using Python, Pandas, and Jupyter Notebook, including OCR and text similarity techniques to extract data and identify potential matches between business locations.
- Support sales executive inquiries, incidents, and requests by researching and validating merchant accounts, addresses, branches, and sales history to assist with daily operations and decision-making.

MERCK **Data Quality Control and Process Improvement** **March 2024 – September 2024**

Developed data and process automation solutions for quality control, focused on improving batch traceability, digitizing records, and supporting KPI monitoring in a regulated environment.

- Designed a centralized database to integrate and standardize information from Access, Excel, and SharePoint, making the data easier to access and use across the teams involved.
- Automated records, controls, and reports using advanced Excel, VBA, Power Query, Power Pivot, and Access, replacing manual activities and improving information availability.
- Developed a QR code system with Python and Access to identify batches, retrieve records, and strengthen traceability throughout quality control processes.
- Digitized logs, files, and controls previously managed on paper, incorporating validations to maintain consistent information and simplify monitoring.
- Built Power BI dashboards to monitor Lead Time, operational performance, and end-to-end (E2E) process progress.
- Documented the implemented procedures, structures, and controls, supporting process standardization and continuous improvement in quality and information management.

URBAN DATA

Systems and Data Quality Consultant

November 2019 – March 2024 | Project-Based Collaborations: April 2024 – July 2026

Coordinated teams and developed solutions for capturing, processing, and validating information in mobility and transportation projects across different regions of Mexico, combining operational knowledge, quality control, and data automation.

- Coordinated analysts, supervisors, data entry staff, and field personnel, monitoring progress, incidents, and discrepancies through the final validation of project deliverables.
- Designed procedures, validation criteria, operating manuals, and training programs to standardize team activities and ensure data quality.
- Developed tools with Excel, VBA, Python, Access, and SQL to clean, segment, and validate GPS routes, geographic files, and databases.
- Processed and integrated GPX, GDB, and KMZ files to generate consolidated databases, routes, maps, reports, and technical deliverables.
- Analyzed and presented information using QGIS, MapSource, Google Earth, My Maps, and AutoCAD, supporting the review of routes, coverage, and geographic consistency.
- Automated data conversion, standardization, and consolidation tasks, streamlining the preparation of deliverables for projects carried out across different regions of the country.

TECHNICAL SKILLS

- **Data Analysis & Visualization:** SQL (BigQuery, MySQL, Access), Advanced Excel, Power Query, Power BI, Tableau, Dashboard Development, Operational & E2E KPIs.
- **Development & Automation:** Python, Pandas, Jupyter Notebook, VBA, Power Automate, ETL Processes, OCR Data Extraction, Data Validation, Workflow Automation.
- **Process & Data Quality:** Process Mapping & Documentation, Data Standardization, Source Reconciliation, Business Rule Implementation, Data Traceability, Incident Management, Quality Controls.
- **Cloud & Enterprise Tools:** Google Cloud Platform (GCP), BigQuery, SharePoint Online, OneDrive, Dataverse, Microsoft 365.
- **Software Engineering & Emerging Tech:** JavaScript, React, Node.js, FastAPI, PostgreSQL, Firebase, Kotlin; use of Generative AI and GitHub Copilot for code development, analysis, and process optimization.

TECHNOLOGY PROJECTS

AFORA | Founder & Developer

Web and mobile platform for capturing, validating, and analyzing operational and mobility data, developed with Kotlin, Firebase, and React.

MOBILYTICS | Founder & Consultant

Development of solutions to automate processes, integrate data sources, and establish quality controls using Python, SQL, Excel, and data analysis tools.

POLITYCS | Founder & Solution Architect

Territorial intelligence platform for integrating public data, indicators, and trends using FastAPI, PostgreSQL, and Next.js.

EDUCATION

National Polytechnic Institute – ESCOM

Computer Systems Engineering

Expected Graduation: December 2026

LANGUAGES

Spanish: Native.

English: Intermediate, with technical documentation reading and comprehension skills.
